Insure Good Yields per Acre

B-17 ROYAL ROWDEN

## Newest Regular Bagley Type

This newest of the Bagley Master Strain Cottons was developed from a cross of our 793 Master Strain and some other very prolific strains which gives added vigor for greater yields. Bagley 64 Master Cotton has been isolated, tested, compared and re-tested for many years in the Bagley Genetic Gardens and increase progeny plots. It has passed these rigid tests with exceptional success. Suited to any and all cotton growing soils. Bagley 64 Master grows off fast, fruits quickly, and has pyramidal type strong, sturdy stalk with lengthy, short-jointed fruiting branches, and light foliage. It has a majority of 5-lock drooping bolls that are easily picked, and a deep penetrating root system that makes it a real drought resister. With 50 to 60 bolls per pound seed cotton, IT IS STORM RESISTANT AND HIGH IN VARIETAL PURITY. Bagley 64 Master Cotton is a heavy producer, gives a gin turnout of 38% to 40%, and has an excellent quality staple of 31 3/2-inch to 1 1/32-inch, according to soil and season. You'll enjoy growing this new, different, better cotton! Only a limited quantity of this seed is available this season because of the limited foundation seed stock, so it is advisable to send in your order early.

64 MASTER STRAIN

## Newest and best yielding

### Rowden type

B-17 Royal Rowden is new and different. It is fast becoming known as the cotton that is adaptable to most soils and climates suited to cotton growing. It is very prolific and fast fruiting, often making from 15% to 25% more per acre than ordinary cotton. B-17 has an upright pyramidal stalk with well-spaced, short-jointed fruiting branches that produce big, fluffy bolls which open nicely and are picked easily. 50 to 60 bolls make a pound of seed cotton. This cotton grows off extra fast, sets fruit rapidly, and opens early. The foliage is reduced to minimum, affording less harborage for insects and allowing crop to mature quicker. The good tap and lateral rooting system increases yield ability. The lint turnout runs from 37% to 40%, dependent on land and season. A hard, strong, uniform staple 31 3/2-inch to 1 1/16-inch results, according to soil and season. Bagley B-17 Royal Rowden has uniform, medium to large size seed with well-filled healthy kernels that give good germination. DROUGHT RESISTANT—STORM RESISTANT—WILT RESISTANT.

793 MASTER STRAIN

## Regular Bagley Strain

Our 793 Master Strain is a well-balanced, high yielding cotton that gives excellent performances in the field, at the gin and on the market. Backed by more than 30 years of good sound breeding work, it is very prolific, fast fruiting and often produces from 10% to 25% more than ordinary cotton. The upright, strong, sturdy stalks produce a strong, hard, uniform 15 1/2-inch to 1 full inch staple and a gin lint turnout of 38% to 41%. Dependent on soil and season. Lengthy, short-jointed fruiting branches bear a majority of big, round, uniform five-lock bolls with a slight point. Well-shaped bur makes it easy to pick. 50 to 60 bolls make a pound of seed cotton. 793 grows fast, fruits excessively and matures early. The medium foliage is adequate for proper boll protection during ordinary dry, hot summers. Its deep, penetrating tap roots and fine lateral rooting system often insure crops in dry seasons when ordinary cottons fail. Has medium-size, uniform, high-quality seed that gives good germination. This cotton is highly STORM RESISTANT, DROUGHT RESISTANT and has a HIGH VARIETAL PURITY.

Texas-bred to suit Your land

TYPICAL PYRAMIDAL STALK OF BAGLEY COTTON. Plants like this will make more dollars for You on your own farm

SELECT DELTAPINE

## Heavy Producing Deltapine

Our Bagley Select Deltapine Cotton is an exceptionally heavy yielder being very well suited to bottom land or rich, flat, level land but it also gives good results on upland and is adapted to almost any kind of cotton growing soil. It grows rapidly, sets fruit quickly, matures and opens early. Foliage is very light, making it more insect resistant. It has an upright, sturdy stalk with well-spaced, lengthy, short-jointed fruiting branches which produce medium bolls that open well and pick clean. About 70 to 80 bolls make a pound of seed cotton. It is a heavy fruiter and under favorable conditions increased production of 10% to 25% is often obtained. Average lint turnout ordinarily runs from 39% to 41% dependent on soil and season and has a good uniform staple of 1 inch to 1 1/16 inch according to soil and season. It has a fine rooting system. Seed are small to medium with well-filled kernels. Supply of this seed is very limited, so order early!
